

RISK-BASED VULNERABILITY MANAGEMENT

Identify, target, and prioritize the greatest risks to your business.

No hardware required.

Traditional vulnerability scanning and scoring doesn't account for the intricacies of your business and environment. Cavelo's risk management includes both vulnerability and configuration scanning to help you harden security against both threat actors and employee behavior.

Cost of breach and historical vulnerability reporting enable teams to focus remediation activities on reducing risk and liability, and demonstrate value to the business.

WHY CAVELO

Prioritize vulnerability management and remediation

Bring CVSS and EPSS scores into the context of your environment and sensitive data to manage your liability exposure.

**Reduce your risk**

Materially reduce business risk when patching

**Measure the cost**

Understand your liability with Cavelo's cost of breach metric

**Show your progress**

Track the historical effect of your vulnerability management activities

CAPABILITIES

What to expect

- ✓ Vulnerability scanning for Mac, Windows, and Linux endpoints
- ✓ Endpoint, internal network, and external vulnerability scanning
- ✓ Industry-leading vulnerability feeds with regular updates from a top-tier provider
- ✓ Vulnerability scanning support across 9,700+ different vulnerable products
- ✓ CIS benchmark scanning for configuration recommendations
- ✓ Historical tracking to demonstrate the effect of your vulnerability management activities

MODULE USE CASE

Better together

**Vulnerability
Management****Data
Discovery**

Combine Cavelo's vulnerability management and data discovery modules to better understand your risk exposure liability.

Prioritize and focus your remediation efforts on vulnerabilities that affect your most sensitive data to avoid a costly breach.

"Cavelo's vulnerability engine has allowed us to execute the same coverage we were achieving previously, with less resource utilization than other vendors in the vulnerability space."

William Ercolano | Eze Castle Integration

Cavelo empowers businesses to proactively reduce their cyber risk and liability. Its consolidated attack surface management platform combines sensitive data and asset discovery, access management, and risk-based vulnerability management to simplify governance and compliance initiatives and risk remediation.
